

# Scan Report

June 4, 2025

## Summary

This document reports on the results of an automatic security scan. All dates are displayed using the timezone “Coordinated Universal Time”, which is abbreviated “UTC”. The task was “Full Network Scan”. The scan started at Tue Jun 3 10:56:51 2025 UTC and ended at Tue Jun 3 15:26:16 2025 UTC. The report first summarises the results found. Then, for each host, the report describes every issue found. Please consider the advice given in each description, in order to rectify the issue.

| Total: 8                       | 0    | 5      | 9   | 0   | 0              |

Vendor security updates are not trusted.

Overrides are off. Even when a result has an override, this report uses the actual threat of the result.

Information on overrides is included in the report.

Notes are included in the report.

This report might not show details of all issues that were found.

Issues with the threat level “Log” are not shown.

Issues with the threat level “Debug” are not shown.

Issues with the threat level “False Positive” are not shown.

Only results with a minimum QoD of 70 are shown.

This report contains all 14 results selected by the filtering described above. Before filtering there were 198 results.

## 2 Results per Host

### 2.1 192.168.31.1

Host scan start Tue Jun 3 10:57:15 2025 UTC

Host scan end Tue Jun 3 12:02:39 2025 UTC

| Service (Port)               | Threat Level |
|------------------------------|--------------|
| <a href="#">5068/tcp</a>     | Medium       |
| <a href="#">7443/tcp</a>     | Medium       |
| <a href="#">443/tcp</a>      | Medium       |
| <a href="#">8443/tcp</a>     | Medium       |
| <a href="#">general/icmp</a> | Low          |
| <a href="#">general/tcp</a>  | Low          |

#### 2.1.1 Medium 5068/tcp

|  |
|--|
| Medium (CVSS: 5.0)   |
| NVT: SSL/TLS: Renegotiation DoS Vulnerability (CVE-2011-1473, CVE-2011-5094)   |
| <b>Summary</b><br>The remote SSL/TLS service is prone to a denial of service (DoS) vulnerability.  |
| <b>Quality of Detection (QoD):</b> 70%   |
| <b>Vulnerability Detection Result</b><br>The following indicates that the remote SSL/TLS service is affected:<br>Protocol Version   Successful re-done SSL/TLS handshakes (Renegotiation) over an<br>↪ existing / already established SSL/TLS connection<br>-----<br>↪-----<br>TLSv1.0   10<br>TLSv1.1   10<br>TLSv1.2   10  |
| <b>Impact</b><br>The flaw might make it easier for remote attackers to cause a DoS (CPU consumption) by performing many renegotiations within a single connection.   |
| <b>Solution:</b><br><b>Solution type:</b> VendorFix<br>Users should contact their vendors for specific patch information.<br>A general solution is to remove/disable renegotiation capabilities altogether from/in the affected SSL/TLS service.   |
| <b>Affected Software/OS</b><br>Every SSL/TLS service which does not properly restrict client-initiated renegotiation.  |
| <b>Vulnerability Insight</b><br>The flaw exists because the remote SSL/TLS service does not properly restrict client-initiated renegotiation within the SSL and TLS protocols.<br>Note: The referenced CVEs are affecting OpenSSL and Mozilla Network Security Services (NSS) but both are in a DISPUTED state with the following rationale:<br>> It can also be argued that it is the responsibility of server deployments, not a security library, to prevent or limit renegotiation when it is inappropriate within a specific environment.<br>Both CVEs are still kept in this VT as a reference to the origin of this flaw. |
| <b>Vulnerability Detection Method</b><br>Checks if the remote service allows to re-do the same SSL/TLS handshake (Renegotiation) over an existing / already established SSL/TLS connection.<br>Details: SSL/TLS: Renegotiation DoS Vulnerability (CVE-2011-1473, CVE-2011-5094)<br>OID:1.3.6.1.4.1.25623.1.0.117761  |

### 2.1.2 Medium 7443/tcp

Medium (CVSS: 5.0)

NVT: SSL/TLS: Renegotiation DoS Vulnerability (CVE-2011-1473, CVE-2011-5094)

#### Summary

The remote SSL/TLS service is prone to a denial of service (DoS) vulnerability.

**Quality of Detection (QoD): 70%**

#### Vulnerability Detection Result

The following indicates that the remote SSL/TLS service is affected:  
 Protocol Version | Successful re-done SSL/TLS handshakes (Renegotiation) over an  
 ↪ existing / already established SSL/TLS connection

```

-----
↪-----
TLSv1.2          | 10

```

#### Impact

... continues on next page ...

|   |
|---|
| ...continued from previous page ...   |
| The flaw might make it easier for remote attackers to cause a DoS (CPU consumption) by performing many renegotiations within a single connection.   |
| <b>Solution:</b><br><b>Solution type:</b> VendorFix<br>Users should contact their vendors for specific patch information.<br>A general solution is to remove/disable renegotiation capabilities altogether from/in the affected SSL/TLS service.  |
| <b>Affected Software/OS</b><br>Every SSL/TLS service which does not properly restrict client-initiated renegotiation.   |
| <b>Vulnerability Insight</b><br>The flaw exists because the remote SSL/TLS service does not properly restrict client-initiated renegotiation within the SSL and TLS protocols.<br>Note: The referenced CVEs are affecting OpenSSL and Mozilla Network Security Services (NSS) but both are in a DISPUTED state with the following rationale:<br>> It can also be argued that it is the responsibility of server deployments, not a security library, to prevent or limit renegotiation when it is inappropriate within a specific environment.<br>Both CVEs are still kept in this VT as a reference to the origin of this flaw.  |

[\[ return to 192.168.31.1 \]](#)**2.1.3 Medium 443/tcp**

Medium (CVSS: 5.0)

NVT: SSL/TLS: Renegotiation DoS Vulnerability (CVE-2011-1473, CVE-2011-5094)

**Summary**

The remote SSL/TLS service is prone to a denial of service (DoS) vulnerability.

**Quality of Detection (QoD):** 70%**Vulnerability Detection Result**

The following indicates that the remote SSL/TLS service is affected:  
 Protocol Version | Successful re-done SSL/TLS handshakes (Renegotiation) over an  
 ↪ existing / already established SSL/TLS connection

```
-----
↪-----
TLSv1.2          | 10
```

**Impact**

The flaw might make it easier for remote attackers to cause a DoS (CPU consumption) by performing many renegotiations within a single connection.

**Solution:****Solution type:** VendorFix

Users should contact their vendors for specific patch information.

A general solution is to remove/disable renegotiation capabilities altogether from/in the affected SSL/TLS service.

**Affected Software/OS**

Every SSL/TLS service which does not properly restrict client-initiated renegotiation.

**Vulnerability Insight**

The flaw exists because the remote SSL/TLS service does not properly restrict client-initiated renegotiation within the SSL and TLS protocols.

Note: The referenced CVEs are affecting OpenSSL and Mozilla Network Security Services (NSS) but both are in a DISPUTED state with the following rationale:

...continued from previous page ...

**Vulnerability Insight**

The Timestamp Reply is an ICMP message which replies to a Timestamp message. It consists of the originating timestamp sent by the sender of the Timestamp as well as a receive timestamp and a transmit timestamp.

**Vulnerability Detection Method**

Sends an ICMP Timestamp (Type 13) request and checks if a Timestamp Reply (Type 14) is received.

Details: ICMP Timestamp Reply Information Disclosure

**2.1.6 Low general/tcp**

Low (CVSS: 2.6)

NVT: TCP Timestamps Information Disclosure

**Summary**

The remote host implements TCP timestamps and therefore allows to compute the uptime.

**Quality of Detection (QoD):** 80%

**Vulnerability Detection Result**

It was detected that the host implements RFC1323/RFC7323.

The following timestamps were retrieved with a delay of 1 seconds in-between:

Packet 1: 1270972754

Packet 2: 1270974031

**Impact**

A side effect of this feature is that the uptime of the remote host can sometimes be computed.

**Solution:**

**Solution type:** Mitigation

### 2.3.1 Low general/tcp

Low (CVSS: 2.6)

NVT: TCP Timestamps Information Disclosure

**Summary**

The remote host implements TCP timestamps and therefore allows to compute the uptime.

**Quality of Detection (QoD):** 80%**Vulnerability Detection Result**

It was detected that the host implements RFC1323/RFC7323.

The following timestamps were retrieved with a delay of 1 seconds in-between:

Packet 1: 2648598264

Packet 2: 3987848810

**Impact**

A side effect of this feature is that the uptime of the remote host can sometimes be computed.

**Solution:****Solution type:** Mitigation

To disable TCP timestamps on linux add the line 'net.ipv4.tcp\_timestamps = 0' to /etc/sysctl.conf. Execute 'sysctl -p' to apply the settings at runtime.

To disable TCP timestamps on Windows execute 'netsh int tcp set global timestamps=disabled'

Starting with Windows Server 2008 and Vista, the timestamp can not be completely disabled.

The default behavior of the TCP/IP stack on this Systems is to not use the Timestamp options when initiating TCP connections, but use them if the TCP peer that is initiating communication includes them in their synchronize (SYN) segment.

See the references for more information.

**Vulnerability Detection Result**

The following response / ICMP packet has been received:

- ICMP Type: 14
- ICMP Code: 0

**Impact**

This information could theoretically be used to exploit weak time-based random number generators in other services.

**Solution:**

**Solution type:** Mitigation

Various mitigations are possible:

- Disable the support for ICMP timestamp on the remote host completely
- Protect the remote host by a firewall, and block ICMP packets passing through the firewall in either direction (either completely or only for untrusted networks)

**Vulnerability Insight**

The Timestamp Reply is an ICMP message which replies to a Timestamp message. It consists of the originating timestamp sent by the sender of the Timestamp as well as a receive timestamp and a transmit timestamp.

**Vulnerability Detection Method**

Sends an ICMP Timestamp (Type 13) request and checks if a Timestamp Reply (Type 14) is received.
